

Golden Star Factory For Plastic Established 1992 , in household sector . its a family company with long experiences for cleaning sector . Golden Star Factory play main roll of environmental impacts , converting PET recycling bottle of factories waste to monofilament fibers which uses in household sector such as Brooms and Brushes. the daily converting capacity around 1000 kg .

Eng. Walid Elayyan is a highly experienced Plastic manufacturing and recycling with over 14 years of professional experience in the field of plastics and polymer technology.

He is currently serving as the Operational Manager at Golden Star Factory, a leading plastic Polyethylene terephthalate (PET) treatment recycling and converting to value products manufacturer in Jordan.

In nature,

everything revolves; there is no waste, but an eternal change of becoming and passing away.

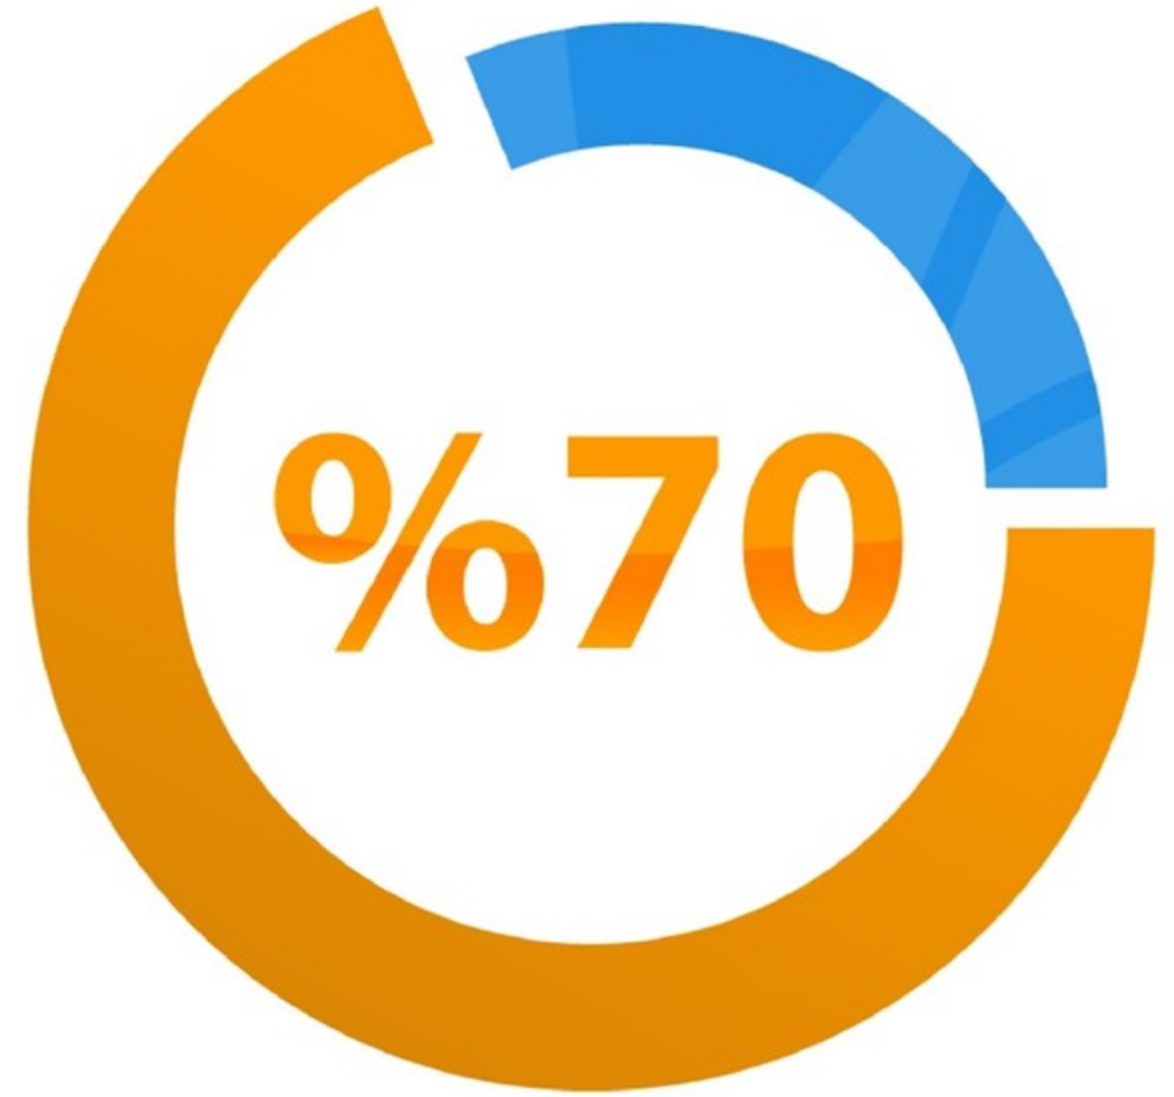

Humans, on the other hand, breaks this natural cycle by producing things that cannot simply be reused.

This creates unnecessarily large mountains of waste, whereby the decisive advantage of plastic, its longevity and robustness, becomes a problem.

One of these type of Plastic is **PET** ,or *PolyEthylene Terephalate*, is used to package **%70** of carbonated soft drinks, fruit juices, dilutable drinks bottled water, light durable, safe and with a smaller carbon footprint than alternatives .

PET is the most recyclable plastic in the world this unique material is vitally important as what our products are packaged with can have significant impacts for our environment and sustainability of our economy

PET bottles , for example,
takes **hundreds** of years to **decompose**.

This is exactly where

Golden Star Factory

comes in BY **Vivo Brand**, after an extensive period of research and development we succeeded in developing Complex recycling and production processes.

The advantage of our products is in which plastic waste can be transformed into durable raw materials which is MONOFILAMENT which uses in Brooms and Brushes production. this production line was assembled and modified to meet international standard quality for brushes and broom by our own capacity. In this way, a cycle is created that is exemplified by Mother Nature.

Golden Star Factory also is, amongst other things, made of disposed packaging, foils, bottle caps and straws. has reach and develop for a new innovation can be use in household cleaning sector which is , Brushes and Mop. can be produced from rPET harder, and more durable, this idea can stop using the natural resources from wooden and steel and minimize the quantity of waste of rPET.

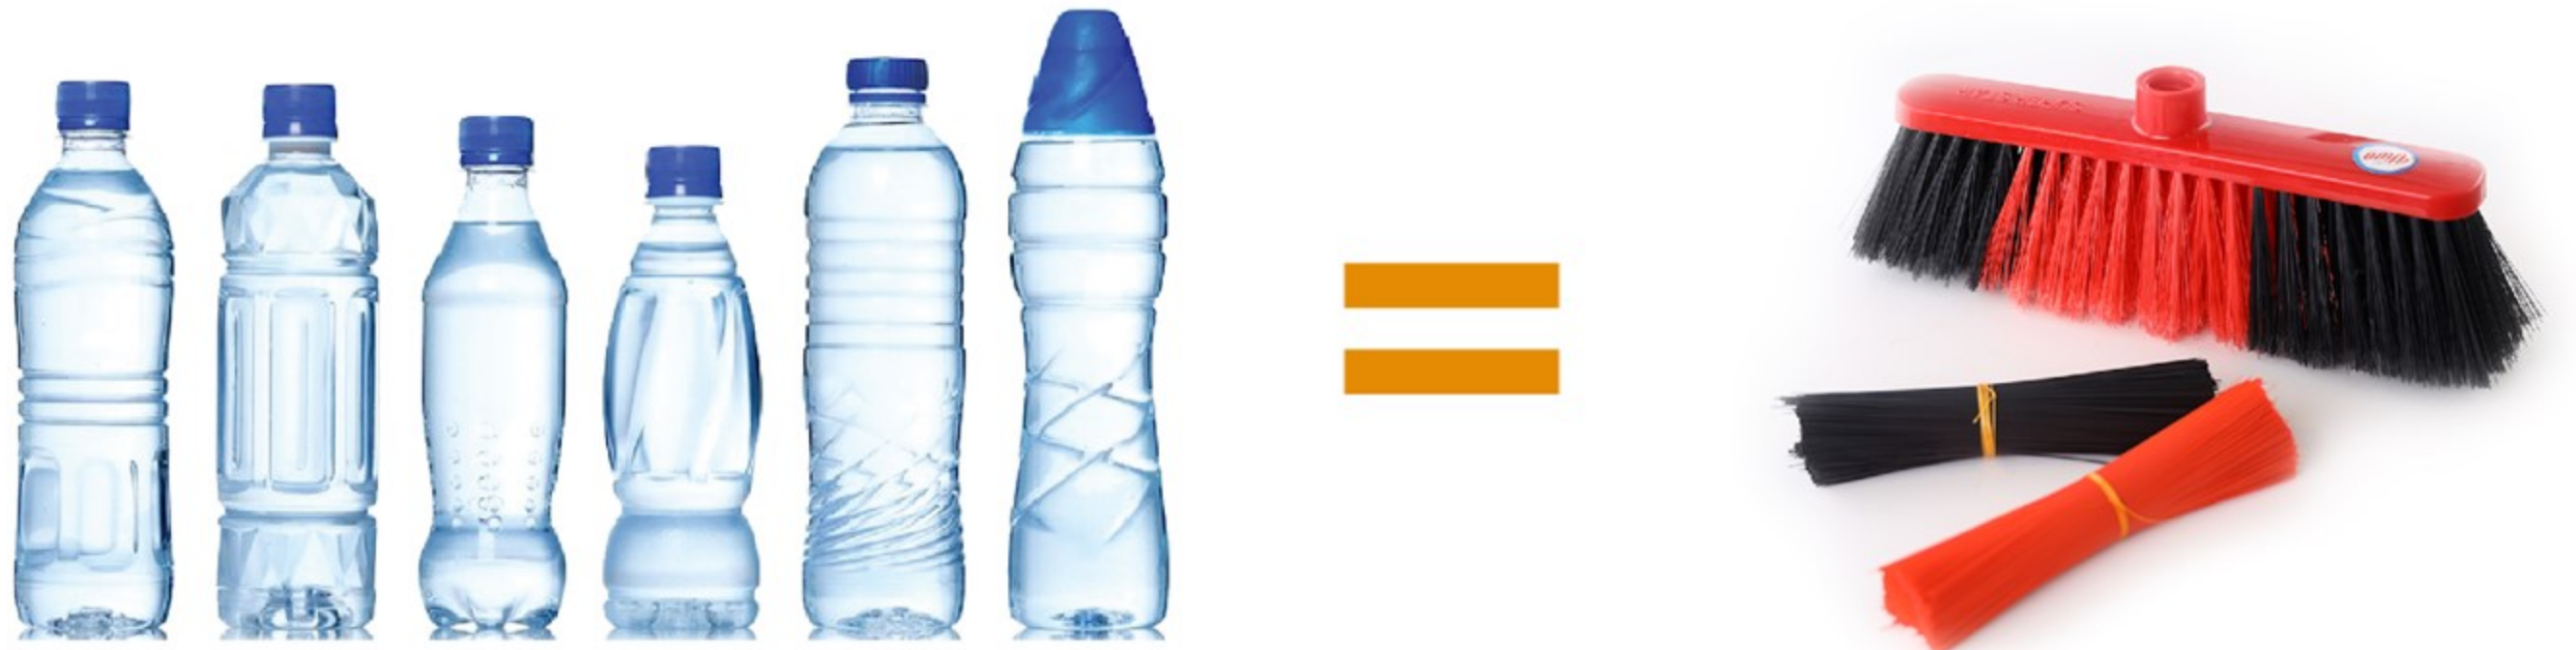

Complex recycling and production processes require and unique product line which consumes by Golden Star Factory For Plastic until gain this production line

The line consists and require full solution of recycling process like washing line crushing sorting and the manufacturing.

The numbers speak for themselves and if you can visually underline how many bottles a recycled product consists of, this is an unbeatable sales argument. Let's go the way together to make a positive decision for climate protection as well as for a clean future. Absolutely an added.

Thanks for your time
